

PAK-III
CHAPMAN'S ICE CREAM

Building Size: 5x10
Project Duration: 2 Months

CUSTOMIZATION & CREATIVITY PRODUCES GREAT SUSTAINABLE RESULTS!

PROJECT OVERVIEW:

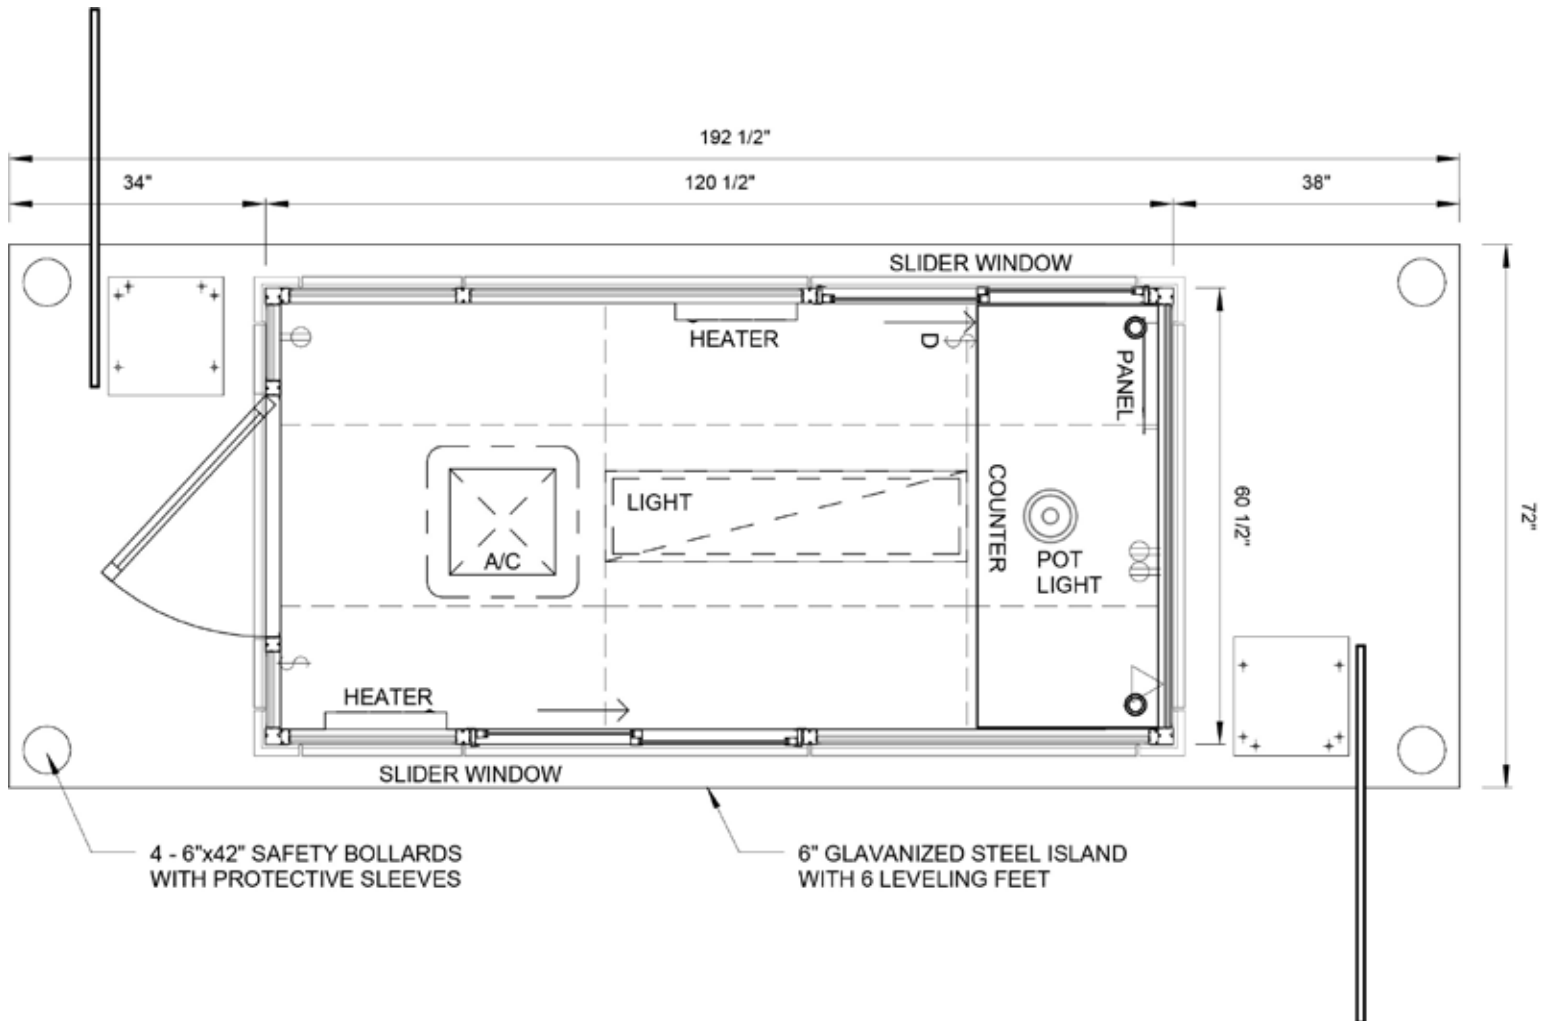

When the customer needed to have a completely relocatable access/security island, we created this innovative **all-in-one** security check-point which includes an attractive security kiosk, a heavy duty fork-liftable island, two security arms and four protective bollards - all designed to be reused at another location if needed. Just another sustainable benefit of modular construction!

FEATURES & BENEFITS:

- Insulated architectural cladding system and grey spandrel glass panels (to lower the visual window band).
- Features inside include heating/cooling for year round attendant comfort.
- Built-in ergonomically designed work station with entrance/exit transaction windows located to suit the attendant's function.
- Re-locatable welded steel island is hot dipped galvanized for durability.
- Six threaded leveling points allow height flexibility when relocated.
- Four heavy duty steel bollards with vinyl sleeves and reflective strips are part of the welded structure steel base, to provide visibility to and protection from approaching vehicles.
- Pre-wired, read-to-use security gates operated from the attendants work station.

FLOOR PLAN

Our expert sales staff can analyze your site, record architectural components and features. Then Canada Kiosk will propose a concept with a floor plan and coloured rendering - for your approval. No obligation. Renderings assist in the site plan approval.
