

Size: 4'-0" x 10'-0"

Project Duration: 8 weeks

Project Information:

This University had to replace their aging parking/security kiosk. They asked us to produce an appearance that would blend in with the surrounding architecture. We also dramatically improved the comfort level of the parking attendants by conforming to their specific ergonomic requirements.

Features:

- Our standard aluminum “C2000” framing system custom powder coated bronze to match existing architectural framing.
- Our FP-1 insulated cladding system configured in long horizontal bands to match existing sand stone block walls found on neighbouring structures.
- A raised roof parapet provides a prominent appearance and hides the rooftop air conditioner.
- Interior directional task lights, 360 degree bronze glass and thin-line framing all help to keep attendant aware of his/her exterior surroundings.

SELECTION. STYLE. SECURITY. SPEED.
